Many things can affect the appearance of color. For best color matching results, a representative job site sample should be cast using materials from the project location.

Colors shown on this chart represent formulations using medium gray cement and sealed with solvent based Clear Guard® Cure and Seal. Variations can be expected due to differences in cement, aggregates and method of application.

Perma-Cast® & Select Grade™ Antiquing Release, & Perma-Tique™

**PERMA-CAST® ANTIQUING RELEASE AND SELECT GRADE™ ANTIQUING RELEASE**

This color chart is used for selecting colors for Perma-Cast® Antiquing Release and Select Grade™ Antiquing Release products. When selecting colors, indicate the Perma-Cast® Antiquing Release color (shown below as R#) or Select Grade™ Antiquing Release color (shown below as SGR#).

Perma-Cast® Antiquing Release or Select Grade™ Antiquing Release is dusted over the surface of freshly colored concrete flatwork before stamping or texturing. The release powder prevents the tool from sticking to the concrete surface during installation and provides a secondary accent of colors.

Tamping the stamping tool embeds the colored release powder in the textured surfaces of the concrete. Upon washing and sealing, the contrast in color between the underlying concrete and the release powder, creates a visually attractive, antiqued look on the concrete. The added release color also enhances the depth of texture for a more natural and realistic finish.

The amount of release agent retained on the concrete will vary with job site conditions. The resulting colorations will range between the concrete color and that of the antiquing release powder. The surface must be sealed and maintained to preserve its antiqued appearance over time.

**PERMA-TIQUE™**

This chart can also be used when selecting colors for the Perma-Tique™ antiquing system. When selecting colors, indicate the Perma-Tique™ color (shown below as PT#). Perma-Tique™ is used to add an accent color to unsealed hardened textured concrete and overlaid textured surfaces. Please refer to the Perma-Tique™ Antiquing Agent Technical Data Sheet for additional information. All information is available for download online at [www.butterfieldcolor.com](http://www.butterfieldcolor.com) and at point of purchase.

Many things can affect the appearance of color. For best color matching results, a representative job site sample should be cast using materials and finishing techniques that will be used on the project.  
  
 Colors shown on this chart represent the color of the release powder. When the release powder is applied to colored concrete and stamped, the two colors will combine and create variations of color. The amount of release color retained after washing will also vary depending on the condition of the concrete when it was stamped.
